

# DESIGNING ECONOMIC EVALUATION ALONGSIDE CLINICAL STUDIES

2<sup>nd</sup> August 2016

One-day short course focusing on key practical aspects required for planning, designing and conducting economic evaluation alongside clinical studies. Participants will learn specific information on choice of utility instruments, the processes for incorporating cost in different clinical areas and disciplines and how economic modelling and economic evaluation can contribute to research programs.

The course is designed for researchers, investigators, trial managers and others involved in clinical studies.

No previous knowledge required, however attending our *Introduction to Cost-Effectiveness Analysis in Health* course is recommended.
